

# DATA STRUCTURE

## Data Structure and Algorithms

**Muhammad Basit**

# TABLE OF CONTENTS

A typical syllabus for Data Structures and Algorithms (DSA) is divided into multiple modules covering various fundamental and advanced topics. Below is a detailed syllabus outline, which includes both data structures and algorithms along with their applications.

## **EMPHASIS INTRODUCTION TO DATA STRUCTURES AND ALGORITHMS ..... 1**

Overview of Data Structures and Algorithms .....	1
Definition of Data Structures	
Definition of Algorithms	
Importance of Time and Space Complexity	
Big-O Notation, Omega ( $\Omega$ ), Theta ( $\Theta$ ) Notations	
Analyzing Algorithms .....	2
Time Complexity: Best, Average, and Worst Cases	
Space Complexity	
Asymptotic Analysis	
Recurrence Relations (e.g., Master Theorem)	

## **EMPHASIS ARRAYS AND STRINGS ..... 2**

Arrays.....	1
Static vs Dynamic Arrays	
Operations: Insert, Delete, Search, Traverse	
Two-Dimensional Arrays	
String .....	2
Basic String Operations (Concatenation, Substrings, Pattern Matching)	
String Algorithms (e.g., KMP Algorithm, Rabin-Karp Algorithm)	
Character Arrays vs Strings in High-Level Languages	

## **EMPHASIS LINKED LISTS..... 3**

Singly Linked List .....	1
Creation, Insertion, Deletion, Traversal	
Reversing a Linked List	
Detecting Loops in a Linked List	
Doubly Linked List .....	2
Insertion, Deletion, and Traversal	
Advantages over Singly Linked List	
Circular Linked List.....	3
Applications of Linked Lists	

## **NO TABLE OF CONTENTS ENTRIES FOUND. EMPHASIS HASHING..... 8**

Concept of Hashing .....	1
--------------------------	---

Hash Functions	
Collision Handling: Separate Chaining, Open Addressing	
Applications of Hashing .....	2
Hash Maps / Hash Tables	
Implementing Set Data Structure	
Cuckoo Hashing	

## **EMPHASIS GRAPHS.....9**

Introduction to Graphs .....	1
Definition: Vertices and Edges	
Types of Graphs: Directed, Undirected, Weighted, Unweighted	
Representation of Graphs (Adjacency Matrix, Adjacency List)	
Graph Traversal Algorithms.....	2
Depth-First Search (DFS)	
Breadth-First Search (BFS)	
Shortest Path Algorithms .....	3
Dijkstra's Algorithm	
Bellman-Ford Algorithm	
Floyd-Warshall Algorithm	
Minimum Spanning Trees .....	4
Prim's Algorithm	
Kruskal's Algorithm	
Advanced Graph Algorithms .....	5
Topological Sorting	
Strongly Connected Components (SCCs)	
Network Flow Algorithms (Ford-Fulkerson)	

## **EMPHASIS SEARCHING ALGORITHMS.....10**

Linear Search .....	1
Binary Search.....	2
Recursive and Iterative Implementations	
Binary Search on a Sorted Array	

Applications of Binary Search	
Exponential Search.....	3
Interpolation Search .....	4

## **EMPHASIS SORTING ALGORITHMS ..... 11**

Comparison-Based Sorting Algorithms .....	1
Bubble Sort	
Selection Sort	
Insertion Sort	
Merge Sort	
Quick Sort	
Heap Sort	
Non-Comparison-Based Sorting Algorithms.....	2
Counting Sort	
Radix Sort	
Bucket Sort	
Stable vs Unstable Sorting Algorithms.....	3
Time and Space Complexities of Sorting Algorithms.....	4

## **EMPHASIS RECURSION AND BACKTRACKING ..... 12**

Introduction to Recursion .....	1
Base Case and Recursive Case	
Tail Recursion	
Recursion Problems .....	2
Factorial, Fibonacci Sequence, Tower of Hanoi	
Backtracking Algorithms .....	3
N-Queens Problem	
Sudoku Solver	
Knight's Tour Problem	
Subset Sum Problem	

## **EMPHASIS DYNAMIC PROGRAMMING ..... 13**

Introduction to Dynamic Programming .....	1
Top-Down (Memoization) vs Bottom-Up (Tabulation) Approaches	
Dynamic Programming Problems.....	2
Fibonacci Sequence	
Longest Common Subsequence (LCS)	
0/1 Knapsack Problem	
Matrix Chain Multiplication	
Coin Change Problem	
Dynamic Programming on Trees .....	3
Dynamic Programming on Graphs .....	4
Shortest Paths (Bellman-Ford)	

## **EMPHASIS GREEDY ALGORITHMS ..... 14**

Introduction to Greedy Algorithms.....	1
Greedy Choice Property, Optimal Substructure	
Greedy Algorithm Problems.....	2
Activity Selection Problem	
Fractional Knapsack Problem	
Huffman Coding	
Job Scheduling Problem	

## **EMPHASIS DIVIDE AND CONQUER ..... 15**

Concept of Divide and Conquer.....	1
Dividing the Problem into Subproblems	
Merging the Subproblems	
Divide and Conquer Algorithms.....	2
Merge Sort	
Quick Sort	
Binary Search	
Closest Pair of Points	

## **EMPHASIS BIT MANIPULATION ..... 16**

Basics of Bitwise Operations.....	1
AND, OR, XOR, NOT	
Left Shift, Right Shift	
Bit Manipulation Tricks .....	2
Swapping Numbers without a Temporary Variable	
Counting Set Bits	
Power of Two Check	
Applications of Bit Manipulation .....	3

## **EMPHASIS ADVANCED TOPICS..... 17**

String Matching Algorithms .....	1
Knuth-Morris-Pratt (KMP) Algorithm	
Boyer-Moore Algorithm	
Amortized Analysis .....	2
Introduction to Amortized Time Complexity	
Applications: Dynamic Arrays, Splay Trees	
Disjoint Set Union (Union-Find) .....	3
Union by Rank, Path Compression	
Applications in Graph Theory (e.g., Kruskal's Algorithm)	
Advanced Data Structures .....	4
Trie (Prefix Tree)	
Suffix Trees	
Skip Lists	
Self-Adjusting Data Structures (Splay Trees, AVL Trees)	
Approximation Algorithms.....	5
Vertex Cover Problem	
Traveling Salesman Problem (TSP)	

## **EMPHASIS PROBLEM SOLVING AND APPLICATIONS. 18**

Real-World Applications of Data Structures and Algorithms .....	1
Databases, Compilers, Operating Systems, Networking	

Application in Machine Learning (e.g., Decision Trees)	
Competitive Programming Concepts .....	2
Problem-Solving Techniques (Greedy, Dynamic Programming, etc.)	
Common Problems from Online Platforms (LeetCode, Codeforces, etc.)
